

FEX 602 - Educational Technology and Instructional Design

UNIT I: Authoritative Reference Notes and Exhaustive MCQ Bank

Question bank: 312 MCQs | Theory scope: Unit I

Scope note: This document is built specifically around the Unit I syllabus supplied for FEX 602. The reference notes synthesize authoritative educational-technology, instructional-design, adult-learning, extension/RAS and taxonomy sources. Where terminology varies across the literature (especially ID/ISD and pedagogy/andragogy), the notes use qualified distinctions rather than presenting contested boundaries as absolute. The MCQs are derived from these notes and cited sources, with an explanation and reference attached to every answer.

Syllabus Coverage - Unit I

- Understanding terms: Educational Technology, Instructional Design, Instructional Systems Design, Curriculum Design, Pedagogy and Andragogy
- Brief origin and evolution of Educational Technology and Instructional Design as theory and practice
- Relevance of ET and ID in extension and Rural Advisory Services (RAS)
- Extension professionals as instructional designers and architects of the learning experience
- Types of learning/learning domains
- Bloom's taxonomy of the cognitive domain
- Krathwohl, Bloom and Masia's affective domain
- Simpson's psychomotor domain

1. The landscape of Educational Technology and Instructional Design

1.1 Educational Technology (ET)

Educational Technology is broader than the mere use of gadgets in teaching. The Association for Educational Communications and Technology (AECT) defines the contemporary field in terms of ethical study and application of theory, research and practice to advance knowledge, improve learning and performance, and empower learners through the strategic design, management, implementation and evaluation of learning experiences and environments using appropriate processes and resources (AECT, 2023).

A widely cited earlier AECT formulation defined educational technology as the study and ethical practice of facilitating learning and improving performance by creating, using and managing appropriate technological processes and resources (Januszewski & Molenda, 2008). Taken together, these definitions show that ET includes people, processes, theory, design, management, evaluation, media and other resources; it should not be reduced to hardware alone.

A useful distinction is between technology in education and technology of education. Technology in education emphasizes the use of technological tools and media in educational settings. Technology of education emphasizes a systematic, theory-informed approach to solving learning and performance problems. Contemporary ET normally integrates both dimensions.

1.2 Instructional Design (ID)

Instructional Design is the systematic and reflective process of translating principles of learning and instruction into plans for instructional materials, activities, information resources and evaluation (Smith & Ragan, 2005, as reproduced by Johns Hopkins CTLD). In practice, ID begins with a learning or performance need and intentionally aligns learners, objectives, content, methods, media, practice, feedback, assessment and evaluation.

Instructional design can be used for face-to-face courses, field training, workshops, demonstrations, self-learning materials, online courses, video lessons, simulations and blended programmes. Its central concern is not the attractiveness of the medium but whether the entire learning experience is intentionally designed to produce the desired learning or performance.

1.3 Instructional Systems Design (ISD)

Instructional Systems Design applies systems thinking to instruction. It treats instruction as an organized system of interdependent components such as learners, goals, content, methods, media, instructors, learning environments, assessment, feedback and evaluation. A systems approach emphasizes relationships among components, alignment with goals, feedback loops and continuous improvement.

The terms instructional design, instructional development and instructional systems design overlap substantially in the literature. A useful working distinction is that ID can refer broadly to designing instruction at different scales, while ISD highlights a systematic, systems-oriented methodology and is especially useful for larger or more complex instructional programmes. Gustafson and Branch (2002) classify instructional development models by classroom, product and system orientations, illustrating that design may occur at multiple scales.

1.4 Curriculum Design

Curriculum design operates at a broader programme or course level. UNESCO describes curriculum as the design, planning and sequencing of teaching and learning processes, including purpose, content, learning activities/practices and modalities for assessing learner achievement. Curriculum development is a systematic process that includes aims, content, methods and evaluation procedures (UNESCO).

Curriculum design asks what a programme should enable learners to learn across a coherent sequence. Instructional design asks how particular learning experiences, units, lessons or training interventions should be designed to achieve intended outcomes. In practice the boundaries overlap, but curriculum design is usually broader in scope than the design of a single instructional event.

1.5 Pedagogy and Andragogy

Pedagogy is widely used today to mean the art, science and practice of teaching. Historically, the word is associated with teaching children. Andragogy refers to the art and science of helping adults learn

and is especially associated with Malcolm Knowles, although the term itself is credited to Alexander Kapp in 1833.

Knowles' adult-learning framework is commonly summarized through six assumptions: adults need to know why they need to learn something; their self-concept moves toward self-direction; their experience is a rich learning resource; readiness to learn is closely related to life roles and real tasks; orientation to learning is problem- or life-centred and favors immediate application; and motivation is often strongly internal, though external motives also matter.

Pedagogy and andragogy should not be treated as rigid mutually exclusive boxes. They are better understood as useful orientations. The appropriate degree of learner direction, facilitation, structure, experience-based learning and problem-centredness depends on the learner, task and context. This is particularly important in extension, where learners are often adults with substantial experiential knowledge.

2. Origin and evolution of Educational Technology and Instructional Design

2.1 Evolution of Educational Technology

The roots of modern educational technology include the visual instruction movement of the early twentieth century, the use of films, slides and other instructional media, and the subsequent audiovisual movement. The professional lineage of AECT began in 1923 when the National Education Association established the Division of Visual Instruction.

During and after the Second World War, audiovisual media, systematic training, behavioural objectives and the science of learning influenced training and education. Programmed instruction and teaching machines in the 1950s and 1960s further shifted attention from media alone toward the design of learning processes.

AECT's 1963 definitional work emphasized audiovisual communications and the design/use of messages that control the learning process. A 1972 definition explicitly used the term educational technology and emphasized systematic identification, development, organization and utilization of learning resources. The 1977 definition framed ET as a complex integrated problem-solving process involving people, procedures, ideas, devices and organization.

In 1994, AECT defined instructional technology as the theory and practice of design, development, utilization, management and evaluation of processes and resources for learning. In 2008, the field was defined around the study and ethical practice of facilitating learning and improving performance through creating, using and managing technological processes and resources. The 2023 AECT definition further emphasizes theory, research, ethical practice, empowerment of learners, learning experiences/environments, and strategic design, management, implementation and evaluation.

Across this history, a major conceptual movement is visible: from emphasis on audiovisual products and media, toward communication and learning processes, then systems/problem-solving approaches, and finally toward ethical, learner-centred, research-informed design and performance improvement.

2.2 Evolution of Instructional Design

Modern instructional design is commonly traced to systematic training efforts during the Second World War, when large numbers of military personnel had to be trained rapidly and effectively. These efforts encouraged task analysis, clearly specified objectives, standardized instructional procedures and evaluation of performance (Reiser, 2001b).

During the 1950s and 1960s, behavioural learning theory, programmed instruction, behavioural objectives, criterion-referenced testing and formative evaluation contributed to the emergence of systematic instructional design. Bloom and colleagues' 1956 taxonomy also gave educators a language for classifying cognitive objectives.

The 1960s and 1970s saw the development and proliferation of instructional design models and systems approaches. During the 1980s and later decades, cognitive psychology, microcomputers, performance technology and constructivist perspectives broadened the field. More recent practice includes learner-centred design, digital and blended learning, online environments, learning experience design, iterative development and data-informed evaluation.

The evolution of ID therefore reflects a shift from narrowly specified training procedures toward a broader design discipline that integrates learning theory, systems thinking, media, assessment, context, learner experience and continuous improvement.

3. Relevance of ET and ID in Extension and Rural Advisory Services (RAS)

3.1 Why ET and ID matter in extension

Extension and Rural Advisory Services work with heterogeneous learners who differ in age, literacy, language, experience, gender, access to technology, production systems, goals and socio-economic conditions. Effective learning therefore requires more than simply delivering technical information; it requires deliberate design around learners and context.

FAO and GFRAS increasingly describe extension/RAS as participatory, facilitation-based and learner-centred rather than purely top-down transfer of information. GFRAS' New Extensionist Learning Kit specifically includes adult learning for behavioural change, extension methods, facilitation, communication and e-extension, reinforcing the relevance of educational design competence for extension professionals.

ET and ID help extension professionals conduct needs assessment, formulate observable learning outcomes, organize and sequence content, select appropriate methods and media, create opportunities for practice and reflection, adapt instruction to local contexts, provide feedback, assess learning and performance, and evaluate whether an intervention should be improved or redesigned.

In RAS, instructional design can improve relevance, inclusion, scalability, consistency and efficiency. It can support face-to-face demonstrations, Farmer Field Schools, group meetings, radio, video, mobile learning, online learning and blended formats. Technology should be selected according to the learning problem and context rather than used merely because it is available.

3.2 Extension professionals as instructional designers and architects of learning experience

An extension professional acts as an instructional designer when diagnosing learner needs; specifying what participants should know, value or be able to do; choosing and sequencing content; selecting learning methods and media; designing practice; giving feedback; assessing learning; and evaluating the intervention.

The phrase architect of the learning experience emphasizes orchestration. The professional designs the conditions in which learning occurs: who participates, what prior knowledge and experience are activated, what problems learners work on, how interaction is organized, which media are used, how practice and reflection occur, and how transfer to real-life performance is supported.

For adult and rural learners, good design usually values existing experience, participation, problem solving, immediate relevance, local language and examples, accessibility, flexible delivery and opportunities to learn by doing. The extension professional therefore shifts from being only a transmitter of technical messages to being a facilitator and designer of learning, innovation and behaviour-change processes.

4. Learning domains and taxonomies

4.1 Three broad learning domains

Educational objectives are commonly discussed across three broad domains: cognitive (knowledge and intellectual processes), affective (attitudes, values, interests and internalization), and psychomotor (physical, motor and performance skills). The three domains are analytically distinct but often interact in authentic performance.

Good instructional design aligns objectives, learning activities and assessment with the intended domain. A lecture may support knowledge acquisition, but a psychomotor skill normally requires demonstration and practice, while affective outcomes require opportunities for engagement, reflection, valuing and consistent behaviour.

4.2 Bloom's original taxonomy of the cognitive domain

Bloom and colleagues published *Taxonomy of Educational Objectives: Handbook I: Cognitive Domain* in 1956. The six major categories in the original hierarchy are Knowledge, Comprehension, Application, Analysis, Synthesis and Evaluation, generally moving from simpler to more complex intellectual performance.

Knowledge concerns recall or recognition of learned material. Its original substructure includes knowledge of specifics (terminology and specific facts), ways and means of dealing with specifics (conventions, trends and sequences, classifications and categories, criteria and methodology), and universals and abstractions in a field (principles/generalizations and theories/structures).

Comprehension involves grasping meaning and includes translation, interpretation and extrapolation. Application is the use of abstractions, principles or methods in new or concrete situations. Analysis involves breaking material into parts and understanding elements, relationships and organizational principles. Synthesis involves combining parts to form a new whole and includes production of a unique communication, a plan or proposed set of operations, or a set of abstract relations. Evaluation involves judgments based on internal evidence and external criteria.

The 2001 revision by Anderson and Krathwohl changed the category labels to verbs and reorganized the upper levels as Remember, Understand, Apply, Analyze, Evaluate and Create. It also introduced a knowledge dimension: factual, conceptual, procedural and metacognitive knowledge. For examinations, the original and revised forms should be distinguished rather than mixed.

4.3 Krathwohl, Bloom and Masia's affective domain

Krathwohl, Bloom and Masia published Handbook II: Affective Domain in 1964. The hierarchy represents increasing internalization of values. Its five major levels are Receiving, Responding, Valuing, Organization and Characterization by a value or value complex.

Receiving involves awareness, willingness to receive and controlled or selected attention. Responding moves from acquiescence in responding to willingness to respond and satisfaction in responding. Valuing includes acceptance of a value, preference for a value and commitment.

Organization involves conceptualization of a value and organization of a value system. Characterization represents the stage at which a value system consistently organizes behaviour; the original framework includes generalized set and characterization. The progression is therefore from attending to a phenomenon toward stable, internally organized value-guided behaviour.

4.4 Simpson's psychomotor domain

Elizabeth J. Simpson developed a widely used psychomotor taxonomy. The seven levels are Perception, Set, Guided Response, Mechanism, Complex Overt Response, Adaptation and Origination.

Perception is the use of sensory cues to guide motor activity. Set is readiness to act and may include mental, physical and emotional readiness. Guided Response is the early stage of learning a complex skill through imitation and trial-and-error practice. Mechanism is the stage at which learned responses become more habitual and are performed with growing confidence and proficiency.

Complex Overt Response is skillful performance of complex movement patterns with a high degree of proficiency. Adaptation is the ability to modify learned movement patterns to meet special requirements or new situations. Origination is the creation of new movement patterns or procedures to fit a particular situation or problem. The sequence therefore moves from sensory readiness and guided performance toward fluent, adaptable and creative motor performance.

	description: the art, science and practice of teaching; historically associated with the teaching of children?						distinction is important because the six syllabus terms overlap but are not identical.	
6	Which term best matches the following description: the art and science of helping adults learn, especially associated with Malcolm Knowles?	Instructional Design	Instructional Systems Design	Pedagogy	Andragogy	D	Andragogy is used here in this sense. The distinction is important because the six syllabus terms overlap but are not identical.	Unit I Notes \$1; R1/R7/R8/R9
7	Which of the following best describes Educational Technology?	the art and science of helping adults learn, especially associated with Malcolm Knowles	the art, science and practice of teaching; historically associated with the teaching of children	a systematic and reflective process for translating principles of learning and instruction into plans for effective learning experiences	an ethical, theory- and research-informed field concerned with designing, managing, implementing and evaluating learning experiences and environments using appropriate processes and resources	D	The defining emphasis of Educational Technology is: an ethical, theory- and research-informed field concerned with designing, managing, implementing and evaluating learning experiences and environments using appropriate processes and resources.	Unit I Notes \$1
8	Which of the following best describes Instructional Design?	a systems-oriented approach that treats instruction as interdependent components aligned through goals, feedback and evaluation	the broader design, planning and sequencing of purposes, content, learning activities and assessment across a programme or course	a systematic and reflective process for translating principles of learning and instruction into plans for effective learning experiences	the art and science of helping adults learn, especially associated with Malcolm Knowles	C	The defining emphasis of Instructional Design is: a systematic and reflective process for translating principles of learning and instruction into plans for effective learning experiences.	Unit I Notes \$1
9	Which of the following best describes Instructional Systems Design?	the broader design, planning and sequencing of purposes, content, learning activities and assessment across a programme or course	an ethical, theory- and research-informed field concerned with designing, managing, implementing and evaluating learning experiences and environments using appropriate processes and resources	the art and science of helping adults learn, especially associated with Malcolm Knowles	a systems-oriented approach that treats instruction as interdependent components aligned through goals, feedback and evaluation	D	The defining emphasis of Instructional Systems Design is: a systems-oriented approach that treats instruction as interdependent components aligned through goals, feedback and evaluation.	Unit I Notes \$1
10	Which of the following best describes Curriculum Design?	a systematic and reflective process for translating principles of learning and instruction into plans for effective learning	a systems-oriented approach that treats instruction as interdependent components aligned through goals,	an ethical, theory- and research-informed field concerned with designing, managing, implementing and evaluating learning	the broader design, planning and sequencing of purposes, content, learning activities and assessment across a	D	The defining emphasis of Curriculum Design is: the broader design, planning and sequencing of purposes, content,	Unit I Notes \$1

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
		experiences	feedback and evaluation	experiences and environments using appropriate processes and resources	programme or course		learning activities and assessment across a programme or course.	
11	Which of the following best describes Pedagogy?	a systems-oriented approach that treats instruction as interdependent components aligned through goals, feedback and evaluation	the art, science and practice of teaching; historically associated with the teaching of children	the broader design, planning and sequencing of purposes, content, learning activities and assessment across a programme or course	an ethical, theory- and research-informed field concerned with designing, managing, implementing and evaluating learning experiences and environments using appropriate processes and resources	B	The defining emphasis of Pedagogy is: the art, science and practice of teaching; historically associated with the teaching of children.	Unit I Notes \$1
12	Which of the following best describes Andragogy?	the art and science of helping adults learn, especially associated with Malcolm Knowles	an ethical, theory- and research-informed field concerned with designing, managing, implementing and evaluating learning experiences and environments using appropriate processes and resources	a systematic and reflective process for translating principles of learning and instruction into plans for effective learning experiences	the broader design, planning and sequencing of purposes, content, learning activities and assessment across a programme or course	A	The defining emphasis of Andragogy is: the art and science of helping adults learn, especially associated with Malcolm Knowles.	Unit I Notes \$1
13	Which statement most accurately reflects contemporary Educational Technology?	It is limited to electronic devices used in classrooms	It combines theory, research, ethical practice, design, implementation, management and evaluation of learning experiences	It is synonymous with computer literacy	It is the manufacture of audiovisual hardware	B	Contemporary ET is a broad field of study and practice, not a synonym for gadgets or computer use.	\$1.1; R1, R2
14	In the 2023 AECT definition, which idea is explicitly emphasized?	Empowering learners	Replacing teachers with machines	Standardizing all learners to one method	Restricting technology to digital devices	A	The 2023 definition explicitly includes empowerment of learners along with learning and performance.	\$1.1; R1
15	Which activity is clearly within Educational Technology even if no electronic gadget is used?	Systematically designing and evaluating a learning experience	Purchasing the newest projector without a learning purpose	Replacing every field visit with a video	Using technology only for entertainment	A	ET includes systematic design and evaluation of learning processes; electronics are not a necessary condition.	\$1.1; R1, R2
16	The phrase 'technology in education' most directly emphasizes:	Use of technological tools and media in educational settings	The complete systems approach to all learning problems	Only curriculum policy	Only adult learning theory	A	Technology in education emphasizes tools/media; technology of education emphasizes a systematic educational approach.	\$1.1
17	The phrase 'technology of	A systematic theory-informed approach to	The physical maintenance of	Buying more audiovisual	Teaching only through the Internet	A	Technology of education refers to	\$1.1

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	education' most directly emphasizes:	educational and learning problems	computers	equipment			systematic application of knowledge and processes to educational problems.	
18	Which is the best reason that Educational Technology should not be equated with hardware?	ET includes processes, theory, design, management and evaluation as well as resources	Hardware is never used in education	Only books are educational technologies	ET deals only with affective learning	A	Modern definitions explicitly include processes, practices and learning design, not just devices.	\$1.1; R1, R2
19	In the 2008 AECT formulation, Educational Technology was explicitly described as a study and ____ practice.	ethical	commercial	mechanical	informal	A	The 2008 AECT definition foregrounded 'ethical practice'.	\$1.1; R2
20	In the 2008 AECT definition, the two broad intended outcomes were facilitating learning and:	improving performance	increasing device ownership	reducing curriculum content	eliminating assessment	A	The definition paired facilitating learning with improving performance.	\$1.1; R2
21	Which trio appears in the 2008 AECT definition as actions involving technological processes and resources?	Creating, using and managing	Buying, storing and discarding	Teaching, examining and certifying	Reading, writing and calculating	A	The 2008 definition uses the terms creating, using and managing.	\$1.1; R2
22	Which sequence best captures a contemporary ET mindset?	Identify learning need → design experience → implement → evaluate and improve	Buy device → find a use for it → ignore outcomes → repeat	Choose media → omit objectives → avoid feedback → certify	Standardize content → ignore learners → maximize delivery → stop	A	ET begins with learning/performance needs and uses design, implementation and evaluation deliberately.	\$1.1; R1
23	Instructional design is best judged primarily by whether:	Learning experiences are aligned with intended outcomes	The presentation contains many animations	The newest platform is used	The teacher speaks for the entire session	A	ID is concerned with intentional alignment and effectiveness, not technological novelty.	\$1.2; R7
24	A designer begins by studying a performance gap, learners and context before choosing a method. This reflects:	Instructional design	Random media selection	Unstructured lecturing	Curriculum omission	A	Analysis of needs, learners and context is a core ID activity.	\$1.2; R7
25	Which is NOT a central concern of instructional design?	Alignment of objectives, learning activities and assessment	Learner characteristics and context	Feedback and evaluation	Maximizing the number of technological tools regardless of need	D	Instructional design selects methods and tools because they serve learning, not because more	\$1.2

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
							technology is inherently better.	
26	Instructional Systems Design differs in emphasis from a narrow lesson-design view because ISD stresses:	Interdependence of components in an instructional system	Only teacher personality	Only textbook selection	Only classroom furniture	A	ISD emphasizes systems thinking, component relationships, alignment and feedback.	\$1.3; R6
27	Which component would most clearly function as feedback in an instructional system?	Assessment results used to revise instruction	A fixed syllabus never reviewed	A projector stored in a cupboard	The colour of classroom walls	A	Feedback means information about performance of the system that is used for correction or improvement.	\$1.3
28	Gustafson and Branch's classification of ID models illustrates that instructional design can occur at:	Classroom, product and system levels	Only primary-school level	Only corporate level	Only online level	A	Their schema classifies models by classroom, product and system orientations.	\$1.3; R6
29	Curriculum design is typically broader than the design of a single training session because it addresses:	Purpose, content, sequence, learning experiences and assessment across a programme or course	Only the font used in handouts	Only one classroom activity	Only learner attendance	A	Curriculum design concerns the coherent architecture of a course/programme.	\$1.4; R8
30	According to UNESCO's curriculum framing, curriculum includes purpose, content, activities/learning practices and:	Modalities for assessing learner achievement	Only hardware procurement	Only teacher recruitment	Only admission criteria	A	Assessment modalities are explicitly part of the curriculum definition.	\$1.4; R8
31	Which statement best captures the relationship between curriculum design and instructional design?	Curriculum design is usually broader, while ID designs particular learning experiences within or across that curriculum	They are always completely unrelated	Instructional design is always broader than national curriculum planning	Curriculum design concerns only examinations	A	The two overlap, but curriculum design usually works at a broader programme/course level.	\$1.4
32	A faculty revises an entire MSc programme by defining programme outcomes, sequencing courses and aligning assessment. This is primarily:	Curriculum design	Only instructional media production	Only psychomotor training	Only classroom management	A	The scope is programme-wide, which is characteristic of curriculum design.	\$1.4; R8
33	An extension trainer designs a two-hour session by aligning objectives, demonstration, group	Instructional design	National curriculum reform	Library automation	Institutional accreditation	A	Designing a specific learning intervention is an ID task.	\$1.2

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	practice and assessment. This is primarily:							
34	Which Knowles-related adult-learning assumption is described here: Adults benefit from understanding why they need to learn something before investing effort.	Experience	Self-concept	Readiness to learn	Need to know	D	This describes the need to know assumption in the andragogical framework.	\$1.5; R9, R10
35	Which statement best illustrates the andragogical assumption 'Need to know'?	As people mature, they tend to see themselves as increasingly self-directed learners.	Adults bring a reservoir of experience that can be used as a learning resource.	Adult readiness is often linked to developmental tasks and real-life roles.	Adults benefit from understanding why they need to learn something before investing effort.	D	The need to know assumption is represented by this statement.	\$1.5; R9, R10
36	Which Knowles-related adult-learning assumption is described here: As people mature, they tend to see themselves as increasingly self-directed learners.	Need to know	Readiness to learn	Experience	Self-concept	D	This describes the self-concept assumption in the andragogical framework.	\$1.5; R9, R10
37	Which statement best illustrates the andragogical assumption 'Self-concept'?	Adults bring a reservoir of experience that can be used as a learning resource.	As people mature, they tend to see themselves as increasingly self-directed learners.	Adult readiness is often linked to developmental tasks and real-life roles.	Adults are often strongly influenced by internal motives, although external motives also operate.	B	The self-concept assumption is represented by this statement.	\$1.5; R9, R10
38	Which Knowles-related adult-learning assumption is described here: Adults bring a reservoir of experience that can be used as a learning resource.	Orientation to learning	Self-concept	Need to know	Experience	D	This describes the experience assumption in the andragogical framework.	\$1.5; R9, R10
39	Which statement best illustrates the andragogical assumption 'Experience'?	Adults benefit from understanding why they need to learn something before investing effort.	Adults are often strongly influenced by internal motives, although external motives also operate.	Adults often prefer problem-centred learning with immediate application rather than delayed subject-centred learning.	Adults bring a reservoir of experience that can be used as a learning resource.	D	The experience assumption is represented by this statement.	\$1.5; R9, R10
40	Which Knowles-related adult-learning assumption is described here: Adult readiness is often linked to developmental tasks	Orientation to learning	Motivation	Readiness to learn	Self-concept	C	This describes the readiness to learn assumption in the andragogical framework.	\$1.5; R9, R10

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	and real-life roles.							
41	Which statement best illustrates the andragogical assumption 'Readiness to learn'?	Adults bring a reservoir of experience that can be used as a learning resource.	Adults benefit from understanding why they need to learn something before investing effort.	As people mature, they tend to see themselves as increasingly self-directed learners.	Adult readiness is often linked to developmental tasks and real-life roles.	D	The readiness to learn assumption is represented by this statement.	\$1.5; R9, R10
42	Which Knowles-related adult-learning assumption is described here: Adults often prefer problem-centred learning with immediate application rather than delayed subject-centred learning.	Motivation	Experience	Self-concept	Orientation to learning	D	This describes the orientation to learning assumption in the andragogical framework.	\$1.5; R9, R10
43	Which statement best illustrates the andragogical assumption 'Orientation to learning'?	Adults are often strongly influenced by internal motives, although external motives also operate.	Adults benefit from understanding why they need to learn something before investing effort.	Adults bring a reservoir of experience that can be used as a learning resource.	Adults often prefer problem-centred learning with immediate application rather than delayed subject-centred learning.	D	The orientation to learning assumption is represented by this statement.	\$1.5; R9, R10
44	Which Knowles-related adult-learning assumption is described here: Adults are often strongly influenced by internal motives, although external motives also operate.	Motivation	Experience	Self-concept	Orientation to learning	A	This describes the motivation assumption in the andragogical framework.	\$1.5; R9, R10
45	Which statement best illustrates the andragogical assumption 'Motivation'?	Adults bring a reservoir of experience that can be used as a learning resource.	Adults benefit from understanding why they need to learn something before investing effort.	Adult readiness is often linked to developmental tasks and real-life roles.	Adults are often strongly influenced by internal motives, although external motives also operate.	D	The motivation assumption is represented by this statement.	\$1.5; R9, R10
46	The term andragogy is historically credited to:	Alexander Kapp	Benjamin Bloom	Robert Gagne	B. F. Skinner	A	Alexander Kapp used the term in 1833; Malcolm Knowles later popularized its modern adult-learning meaning.	\$1.5; R9/R10
47	The modern adult-learning framework of andragogy is most strongly associated with:	Malcolm Knowles	Benjamin Bloom	Elizabeth Simpson	Robert Reiser	A	Malcolm Knowles popularized and developed the modern andragogical framework.	\$1.5; R9, R10
48	Which statement is the most accurate treatment of pedagogy	They are useful orientations and need not be rigid mutually	Pedagogy can never be used with adults	Andragogy requires no structure from an educator	Andragogy means learning without objectives	A	Modern practice treats the two as orientations whose	\$1.5

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	and andragogy?	exclusive categories					relevance depends on learner, task and context.	
49	In extension education, andragogical principles are especially relevant because many clients:	Are adults with substantial practical experience	Have no prior experience of any kind	Must always learn through lectures	Should be prevented from directing their learning	A	Adult extension learners often bring experience that can be activated as a learning resource.	\$1.5; \$3.1; R12
50	A farmer-training programme begins by asking participants to describe their own pest-management experiences. Which andragogical assumption is being used most directly?	Experience as a learning resource	Need for external punishment	Dependence on teacher authority	Delayed application	A	The design intentionally uses participants' accumulated experience as instructional material.	\$1.5; R9
51	A trainer starts a session by explaining how the skill will solve an immediate production problem. This most directly supports adults' need to:	Know why the learning matters	Avoid practical application	Memorize without context	Depend completely on the trainer	A	Adults are more ready to invest in learning when its purpose and usefulness are clear.	\$1.5; R9
52	Which learning task is most consistent with a problem-centred adult-learning orientation?	Diagnosing why a real farm enterprise is losing money and developing a solution	Memorizing an unrelated glossary without application	Copying definitions for an hour	Listening passively with no connection to practice	A	Andragogy emphasizes real problems and immediate application.	\$1.5; R9, R10
53	Which role is most consistent with an andragogical facilitator?	Structuring conditions for self-directed, experience-based learning	Treating learners as empty vessels	Ignoring learner goals	Preventing learners from contributing examples	A	The facilitator supports learner agency and uses experience and relevance.	\$1.5
54	Which concept is MOST directly represented by this situation? A university decides what competencies its four-semester programme should develop and how courses should be sequenced.	Educational Technology	Curriculum Design	Instructional Systems Design	Andragogy	B	The situation most directly illustrates Curriculum Design.	\$1
55	Which concept is MOST directly represented by this situation? A trainer designs one module with objectives, cases,	Instructional Design	Pedagogy	Instructional Systems Design	Educational Technology	A	The situation most directly illustrates Instructional Design.	\$1

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	practice, feedback and a post-test.							
56	Which concept is MOST directly represented by this situation? A statewide training programme aligns trainers, materials, delivery sites, media, assessment, logistics and feedback mechanisms.	Instructional Systems Design	Instructional Design	Curriculum Design	Educational Technology	A	The situation most directly illustrates Instructional Systems Design.	\$1
57	Which concept is MOST directly represented by this situation? A teacher selects a simulation because it best supports a particular learning objective rather than because the software is new.	Curriculum Design	Educational Technology	Instructional Design	Andragogy	B	The situation most directly illustrates Educational Technology.	\$1
58	Which concept is MOST directly represented by this situation? A facilitator designs learning around adult participants' experience, self-direction and immediate work problems.	Andragogy	Educational Technology	Instructional Systems Design	Pedagogy	A	The situation most directly illustrates Andragogy.	\$1
59	Which concept is MOST directly represented by this situation? A lecturer selects teaching methods and interactions to support student learning in a course.	Pedagogy	Instructional Systems Design	Instructional Design	Curriculum Design	A	The situation most directly illustrates Pedagogy.	\$1
60	Which year is associated with the following milestone in the evolution of Educational Technology? the National Education Association established the	2023	1994	1923	1977	C	The milestone described is associated with 1923.	\$2.1; R1, R2, R3

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	Division of Visual Instruction, a professional ancestor of AECT							
61	Which development is most closely associated with 1923 in the history of Educational Technology?	the National Education Association established the Division of Visual Instruction, a professional ancestor of AECT	AECT-related definitional work centered on audiovisual communications and emphasized design/use of messages and communication processes	an educational technology definition emphasized systematic identification, development, organization and utilization of learning resources	AECT's current definition emphasizes ethical study/application of theory, research and practice, learner empowerment, and strategic design, management, implementation and evaluation of learning experiences and environments	A	In this chronology, 1923 is associated with the National Education Association established the Division of Visual Instruction, a professional ancestor of AECT.	\$2.1; R1, R2, R3
62	Which year is associated with the following milestone in the evolution of Educational Technology? AECT-related definitional work centered on audiovisual communications and emphasized design/use of messages and communication processes	1963	1977	1972	1994	A	The milestone described is associated with 1963.	\$2.1; R1, R2, R3
63	Which development is most closely associated with 1963 in the history of Educational Technology?	the National Education Association established the Division of Visual Instruction, a professional ancestor of AECT	AECT's current definition emphasizes ethical study/application of theory, research and practice, learner empowerment, and strategic design, management, implementation and evaluation of learning experiences and environments	AECT-related definitional work centered on audiovisual communications and emphasized design/use of messages and communication processes	educational technology was defined as study and ethical practice of facilitating learning and improving performance by creating, using and managing technological processes and resources	C	In this chronology, 1963 is associated with AECT-related definitional work centered on audiovisual communications and emphasized design/use of messages and communication processes.	\$2.1; R1, R2, R3
64	Which year is associated with the following milestone in the evolution of Educational Technology? an educational	2008	1977	1972	2023	C	The milestone described is associated with 1972.	\$2.1; R1, R2, R3

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	technology definition emphasized systematic identification, development, organization and utilization of learning resources							
65	Which development is most closely associated with 1972 in the history of Educational Technology?	AECT's current definition emphasizes ethical study/application of theory, research and practice, learner empowerment, and strategic design, management, implementation and evaluation of learning experiences and environments	AECT-related definitional work centered on audiovisual communications and emphasized design/use of messages and communication processes	an educational technology definition emphasized systematic identification, development, organization and utilization of learning resources	educational technology was defined as study and ethical practice of facilitating learning and improving performance by creating, using and managing technological processes and resources	C	In this chronology, 1972 is associated with an educational technology definition emphasized systematic identification, development, organization and utilization of learning resources.	§2.1; R1, R2, R3
66	Which year is associated with the following milestone in the evolution of Educational Technology? educational technology was framed as a complex integrated problem-solving process involving people, procedures, ideas, devices and organization	2008	1977	1994	1923	B	The milestone described is associated with 1977.	§2.1; R1, R2, R3
67	Which development is most closely associated with 1977 in the history of Educational Technology?	an educational technology definition emphasized systematic identification, development, organization and utilization of learning resources	the National Education Association established the Division of Visual Instruction, a professional ancestor of AECT	instructional technology was defined as theory and practice of design, development, utilization, management and evaluation of processes and resources for learning	educational technology was framed as a complex integrated problem-solving process involving people, procedures, ideas, devices and organization	D	In this chronology, 1977 is associated with educational technology was framed as a complex integrated problem-solving process involving people, procedures, ideas, devices and organization.	§2.1; R1, R2, R3
68	Which year is associated with the following milestone in the evolution of Educational	2023	1972	1994	2008	C	The milestone described is associated with 1994.	§2.1; R1, R2, R3

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	Technology? instructional technology was defined as theory and practice of design, development, utilization, management and evaluation of processes and resources for learning							
69	Which development is most closely associated with 1994 in the history of Educational Technology?	AECT's current definition emphasizes ethical study/application of theory, research and practice, learner empowerment, and strategic design, management, implementation and evaluation of learning experiences and environments	AECT-related definitional work centered on audiovisual communications and emphasized design/use of messages and communication processes	instructional technology was defined as theory and practice of design, development, utilization, management and evaluation of processes and resources for learning	educational technology was framed as a complex integrated problem-solving process involving people, procedures, ideas, devices and organization	C	In this chronology, 1994 is associated with instructional technology was defined as theory and practice of design, development, utilization, management and evaluation of processes and resources for learning.	\$2.1; R1, R2, R3
70	Which year is associated with the following milestone in the evolution of Educational Technology? educational technology was defined as study and ethical practice of facilitating learning and improving performance by creating, using and managing technological processes and resources	1977	2008	1972	1963	B	The milestone described is associated with 2008.	\$2.1; R1, R2, R3
71	Which development is most closely associated with 2008 in the history of Educational Technology?	educational technology was defined as study and ethical practice of facilitating learning and improving performance by creating, using and managing technological	AECT-related definitional work centered on audiovisual communications and emphasized design/use of messages and communication processes	an educational technology definition emphasized systematic identification, development, organization and utilization of learning resources	instructional technology was defined as theory and practice of design, development, utilization, management and evaluation of processes and resources for learning	A	In this chronology, 2008 is associated with educational technology was defined as study and ethical practice of facilitating learning and improving performance by creating, using and	\$2.1; R1, R2, R3

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
		processes and resources					managing technological processes and resources.	
72	Which year is associated with the following milestone in the evolution of Educational Technology? AECT's current definition emphasizes ethical study/application of theory, research and practice, learner empowerment, and strategic design, management, implementation and evaluation of learning experiences and environments	1923	2008	2023	1994	C	The milestone described is associated with 2023.	\$2.1; R1, R2, R3
73	Which development is most closely associated with 2023 in the history of Educational Technology?	AECT's current definition emphasizes ethical study/application of theory, research and practice, learner empowerment, and strategic design, management, implementation and evaluation of learning experiences and environments	educational technology was framed as a complex integrated problem-solving process involving people, procedures, ideas, devices and organization	an educational technology definition emphasized systematic identification, development, organization and utilization of learning resources	instructional technology was defined as theory and practice of design, development, utilization, management and evaluation of processes and resources for learning	A	In this chronology, 2023 is associated with AECT's current definition emphasizes ethical study/application of theory, research and practice, learner empowerment, and strategic design, management, implementation and evaluation of learning experiences and environments.	\$2.1; R1, R2, R3
74	The earliest major emphasis in the professional history of Educational Technology was on:	Visual and audiovisual instructional media	Artificial intelligence tutors	Learning analytics dashboards	Virtual reality laboratories	A	The field's professional roots lie in visual instruction and audiovisual media.	\$2.1; R3, R4
75	A major historical shift in Educational Technology was from media/products toward:	Processes, systems, learning and problem solving	Only larger machines	Eliminating evaluation	Avoiding learning theory	A	The field increasingly focused on processes, systems and learning rather than devices alone.	\$2.1; R3
76	Which development helped move attention from machines to systematically designed learning	Programmed instruction	Only blackboard use	School architecture	Library cataloguing	A	Programmed instruction emphasized sequenced learning, feedback and the	\$2.1; R3

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	sequences in the 1950s-1960s?						science of learning.	
77	B. F. Skinner is historically linked to the popularization of:	Programmed instruction and the technology of teaching	The affective taxonomy	Simpson's psychomotor taxonomy	Curriculum accreditation	A	Skinner's programmed instruction helped shape the process-oriented meaning of instructional technology.	\$2.1; R3
78	The 1977 educational technology definition is especially important because it emphasized:	A complex integrated problem-solving process	Only audiovisual equipment	Only instructional television	Only programmed textbooks	A	The 1977 definition shifted the centre of gravity toward systematic problem solving.	\$2.1; R3
79	The 1994 AECT definition organized instructional technology around five domains. Which set is correct?	Design, development, utilization, management and evaluation	Planning, lecturing, drilling, testing and certification	Hardware, software, firmware, networks and storage	Reading, writing, speaking, listening and viewing	A	The five domains were design, development, utilization, management and evaluation.	\$2.1; R3
80	Which theme became explicit in the 2008 AECT definition?	Ethical practice	Elimination of performance concerns	Exclusive use of digital media	Technology as hardware only	A	Ethical practice was explicitly included in the 2008 definition.	\$2.1; R2
81	Which phrase best summarizes the long-term evolution of ET?	From audiovisual media toward systematic, ethical, learner-centred design and performance improvement	From learning science toward device ownership only	From evaluation toward avoidance of feedback	From systems thinking toward isolated tools	A	This captures the broad conceptual movement described in the field's history.	\$2.1; R1-R4
82	Which period is most closely associated with this stage in the evolution of Instructional Design: large-scale systematic military training, task analysis, objectives and performance evaluation?	1950s-1960s	Second World War	1960s-1970s	1980s and later	B	This cluster of developments is associated with Second World War.	\$2.2; R5, R6
83	Which period is most closely associated with this stage in the evolution of Instructional Design: behavioural theory, programmed instruction, behavioural objectives, criterion-referenced testing and formative evaluation?	1950s-1960s	1960s-1970s	1980s and later	Second World War	A	This cluster of developments is associated with 1950s-1960s.	\$2.2; R5, R6

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
84	Which period is most closely associated with this stage in the evolution of Instructional Design: proliferation of instructional design models and systems approaches?	Second World War	1950s-1960s	1960s-1970s	1980s and later	C	This cluster of developments is associated with 1960s-1970s.	\$2.2; R5, R6
85	Which period is most closely associated with this stage in the evolution of Instructional Design: greater influence of cognitive psychology, microcomputers, performance technology and constructivist perspectives?	1980s and later	1950s-1960s	Recent practice	Second World War	A	This cluster of developments is associated with 1980s and later.	\$2.2; R5, R6
86	Which period is most closely associated with this stage in the evolution of Instructional Design: learner-centred, digital, blended and online design; iterative development; learning experience design and data-informed evaluation?	Second World War	Recent practice	1960s-1970s	1980s and later	B	This cluster of developments is associated with Recent practice.	\$2.2; R5, R6
87	Modern instructional design is commonly traced in part to the need during World War II to:	Train large numbers of personnel rapidly and effectively	Replace all instructors with computers	Develop MOOCs	Standardize university admissions	A	Wartime training needs encouraged systematic approaches to instruction and performance.	\$2.2; R5
88	Which practice is most characteristic of early systematic training approaches that influenced ID?	Task analysis and clearly specified objectives	Unplanned content delivery	Avoidance of performance assessment	Selection of media before identifying tasks	A	Task analysis, objectives and evaluation were central to systematic training.	\$2.2; R5
89	Which development provided educators with a classification language for cognitive objectives in 1956?	Bloom's taxonomy	Simpson's taxonomy	The 1994 AECT definition	The Internet	A	Bloom and colleagues published the cognitive taxonomy in 1956.	\$2.2; \$4.2; R13
90	Criterion-referenced testing contributed to instructional design by emphasizing:	Performance relative to specified objectives or criteria	Ranking learners only against one another	Eliminating objectives	Testing only memory	A	Criterion-referenced assessment asks whether intended performance criteria	\$2.2; R5

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
							have been met.	
91	Formative evaluation is especially valuable in ID because it:	Provides information for improving instruction while it is being developed or implemented	Occurs only after a programme is permanently closed	Measures only attendance	Prevents revision	A	Formative evaluation supports iterative improvement.	\$2.2; R5
92	Which intellectual influence broadened ID beyond strongly behaviourist roots during the 1980s and later?	Cognitive psychology	Phrenology	Astrology	Only hardware engineering	A	Reiser identifies increasing interest in cognitive psychology as a major influence.	\$2.2; R5
93	Constructivist perspectives broadened instructional design by drawing attention to:	Learner meaning-making, authentic contexts and active knowledge construction	Only stimulus-response drills	Only device maintenance	Elimination of context	A	Constructivist perspectives emphasized active, contextualized learning.	\$2.2; R5
94	Which statement best describes the evolution of ID?	It expanded from systematic training procedures to a broader design discipline integrating theory, systems, media, assessment and learner experience	It became progressively less concerned with learning	It moved from systems thinking to random teaching	It abandoned evaluation as technology advanced	A	Modern ID integrates multiple theoretical and practical perspectives.	\$2.2; R5-R7
95	Which sequence places selected AECT-related milestones in correct chronological order?	1963 audiovisual communications → 1977 integrated problem-solving process → 1994 five-domain instructional technology definition → 2008 ethical practice definition	1977 integrated process → 1963 audiovisual communications → 2008 ethical practice → 1994 five-domain definition	1994 five-domain definition → 1963 audiovisual communications → 1977 integrated process → 2008 ethical practice	2008 ethical practice → 1994 five-domain definition → 1977 integrated process → 1963 audiovisual communications	A	The historical sequence is 1963, 1977, 1994, 2008.	\$2.1; R2, R3
96	Which sequence best represents the broad conceptual evolution of Educational Technology?	Visual media → audiovisual communication → systems/problem solving → ethical learner-centred design and performance	Systems thinking → visual media → elimination of evaluation → hardware only	Digital media → visual instruction → programmed instruction → no technology	Curriculum design → library science → only radio → no learning theory	A	The field's centre of gravity moved from media toward communication, systems and learner/performance-centred design.	\$2.1
97	Which instructional-design responsibility of an extension professional is described here: identifying what learners and communities actually need before designing	Assessment	Needs assessment	Contextual adaptation	Method and media selection	B	This is needs assessment, a core design responsibility in extension training.	\$3.1-3.2; R11, R12

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	instruction?							
98	Which instructional-design responsibility of an extension professional is described here: specifying what participants should know, value or be able to do?	Method and media selection	Learning outcomes	Assessment	Practice and feedback	B	This is learning outcomes, a core design responsibility in extension training.	\$3.1-3.2; R11, R12
99	Which instructional-design responsibility of an extension professional is described here: organizing ideas and tasks in a learnable order?	Method and media selection	Content sequencing	Assessment	Evaluation	B	This is content sequencing, a core design responsibility in extension training.	\$3.1-3.2; R11, R12
100	Which instructional-design responsibility of an extension professional is described here: choosing demonstrations, discussion, field practice, print, radio, video, mobile or online tools according to purpose and context?	Content sequencing	Learning outcomes	Method and media selection	Assessment	C	This is method and media selection, a core design responsibility in extension training.	\$3.1-3.2; R11, R12
101	Which instructional-design responsibility of an extension professional is described here: giving learners opportunities to perform, receive information and improve?	Evaluation	Practice and feedback	Method and media selection	Needs assessment	B	This is practice and feedback, a core design responsibility in extension training.	\$3.1-3.2; R11, R12
102	Which instructional-design responsibility of an extension professional is described here: gathering evidence of learning or performance?	Contextual adaptation	Learning outcomes	Assessment	Method and media selection	C	This is assessment, a core design responsibility in extension training.	\$3.1-3.2; R11, R12
103	Which instructional-design responsibility of an extension professional is	Evaluation	Method and media selection	Assessment	Learning outcomes	A	This is evaluation, a core design responsibility in extension training.	\$3.1-3.2; R11, R12

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	described here: judging the effectiveness of the instructional intervention and using evidence for improvement?							
104	Which instructional-design responsibility of an extension professional is described here: adjusting language, examples, delivery and technology to literacy, culture, connectivity and local conditions?	Method and media selection	Needs assessment	Contextual adaptation	Evaluation	C	This is contextual adaptation, a core design responsibility in extension training.	\$3.1-3.2; R11, R12
105	Why is needs assessment especially important in extension and RAS?	Learners and farming contexts are heterogeneous, so relevant instruction must respond to actual needs	All rural learners have identical needs	Extension content never changes by location	Needs assessment is required only for online courses	A	Extension learners vary in experience, literacy, language, production system and goals; design must respond to this diversity.	\$3.1; R11, R12
106	A participatory RAS approach treats farmers primarily as:	Active partners in learning, problem solving and innovation	Passive recipients of fixed messages	People whose experience should be ignored	An audience that should never question experts	A	Contemporary RAS increasingly emphasizes farmer-centred, participatory and facilitation-based learning.	\$3.1; R12
107	The GFRAS New Extensionist Learning Kit includes a module specifically on:	Adult Learning for Behavioural Change	Only tractor repair	Only examination administration	Only campus architecture	A	NELK Module 05 focuses on Adult Learning for Behavioural Change.	\$3.1; R12
108	In extension, technology selection should ideally follow:	Learning purpose, learner characteristics and local context	Market popularity of the device alone	The trainer's personal preference regardless of access	A rule that digital media are always superior	A	ID is problem- and learner-centred; technology is a means, not the starting point.	\$3.1
109	Which is the clearest example of an extension professional acting as an instructional designer?	Analyzing farmer needs, defining outcomes, planning demonstration and practice, and evaluating results	Forwarding an unverified video without considering learners	Reading a manual aloud with no adaptation	Choosing a platform before deciding what should be learned	A	The first option integrates analysis, design, practice and evaluation.	\$3.2
110	Calling an extension professional an 'architect of the learning experience' emphasizes the need to:	Orchestrate conditions, interactions, activities, media, practice and feedback that support learning	Construct physical buildings	Focus only on visual appearance	Replace learner participation with content delivery	A	The metaphor refers to deliberate orchestration of the whole learning environment.	\$3.2

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
111	For low-connectivity rural contexts, good instructional design may require:	Selecting accessible offline or low-bandwidth alternatives instead of assuming continuous Internet access	Using high-bandwidth tools regardless of access	Excluding learners without smartphones	Ignoring local infrastructure	A	Contextual adaptation includes access and connectivity constraints.	\$3.1-3.2
112	Which design choice best supports inclusion in a linguistically diverse extension group?	Use locally comprehensible language, visuals and examples and check understanding	Use only technical jargon	Refuse to adapt examples	Assess only through complex written English	A	Good design adapts communication and assessment to learner characteristics while preserving intended outcomes.	\$3.2
113	A Farmer Field School that lets participants observe, experiment, discuss and make decisions is especially consistent with:	Experiential and participatory learning	Purely one-way transmission	Learning without feedback	Assessment without practice	A	Farmer-centred extension often emphasizes learning by doing and collective problem solving.	\$3.1; R11, R12
114	Which is a likely benefit of systematic ID in large extension programmes?	Greater consistency while still allowing contextual adaptation	Guaranteed identical learning for all people	Elimination of local facilitation	No need for evaluation	A	Systematic design can improve consistency and scalability but should still be adapted to context.	\$3.1
115	Which outcome is most directly associated with affective learning in an extension programme?	Developing commitment to safe pesticide handling	Recalling the name of an insecticide	Calibrating a sprayer accurately	Calculating a fertilizer dose	A	Commitment and values are affective outcomes.	\$3; \$4.1
116	Which outcome is most directly associated with psychomotor learning in extension?	Correctly grafting a plant using the required hand movements	Explaining why grafting is useful	Valuing biodiversity	Listing grafting tools	A	The task is a physical skill requiring coordinated performance.	\$4.1; \$4.4
117	Which outcome is most directly cognitive?	Diagnosing a nutrient deficiency from symptoms and evidence	Feeling committed to cooperative action	Performing a complex milking procedure	Demonstrating willingness to attend a meeting	A	Diagnosis requires intellectual processing and application/analysis.	\$4.1-4.2
118	An extension course teaches facts about water conservation but never lets learners practise the required field technique. Which design problem is most evident?	Mismatch between the intended psychomotor outcome and the learning activity	Too much psychomotor practice	Overuse of affective objectives	Excessive learner participation	A	Skill outcomes require demonstration and practice, not information alone.	\$4.1
119	If the desired outcome is long-term commitment to collective resource management, an	Affective domain	Only recall-level cognitive domain	Only psychomotor set	Only equipment inventory	A	Values, commitment and internalization lie in the affective domain.	\$4.1; \$4.3

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	instructional designer should pay particular attention to the:							
120	Which learning domain is primarily concerned with knowledge, understanding and intellectual processes?	Psychomotor	Cognitive	Affective	Administrative	B	The cognitive domain concerns knowledge, understanding and intellectual processes.	\$4.1; R13, R15, R16
121	Which description best matches the Cognitive domain?	knowledge, understanding and intellectual processes	attitudes, interests, values and internalization	physical movement, coordination and motor/performance skills	institutional finance and governance	A	The cognitive domain is concerned with knowledge, understanding and intellectual processes.	\$4.1
122	Which learning domain is primarily concerned with attitudes, interests, values and internalization?	Psychomotor	Cognitive	Affective	Administrative	C	The affective domain concerns attitudes, interests, values and internalization.	\$4.1; R13, R15, R16
123	Which description best matches the Affective domain?	attitudes, interests, values and internalization	physical movement, coordination and motor/performance skills	knowledge, understanding and intellectual processes	institutional finance and governance	A	The affective domain is concerned with attitudes, interests, values and internalization.	\$4.1
124	Which learning domain is primarily concerned with physical movement, coordination and motor/performance skills?	Affective	Cognitive	Psychomotor	Administrative	C	The psychomotor domain concerns physical movement, coordination and motor/performance skills.	\$4.1; R13, R15, R16
125	Which description best matches the Psychomotor domain?	institutional finance and governance	attitudes, interests, values and internalization	knowledge, understanding and intellectual processes	physical movement, coordination and motor/performance skills	D	The psychomotor domain is concerned with physical movement, coordination and motor/performance skills.	\$4.1
126	Why are learning domains useful in instructional design?	They help align objectives, activities and assessments with the type of learning intended	They prove that every outcome must be tested by multiple choice	They eliminate the need for learner analysis	They make all learning purely hierarchical	A	Domains help designers choose suitable learning experiences and evidence for different kinds of outcomes.	\$4.1
127	Which statement about the three learning domains is most accurate?	They are analytically distinct but often interact in real performance	They can never occur together	Only the cognitive domain can be assessed	Psychomotor learning never involves cognition	A	Authentic tasks often integrate knowledge, values and skilled action.	\$4.1
128	In Bloom's original 1956 cognitive	Comprehension	Knowledge	Evaluation	Application	B	Knowledge is the original category	\$4.2; R13

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	taxonomy, which level is described as recall or recognition of previously learned material?						associated with recall or recognition of previously learned material.	
129	Which description best fits the original Bloom category 'Knowledge'?	using abstractions, principles or methods in new or concrete situations	grasping meaning through processes such as translation, interpretation and extrapolation	breaking material into parts and examining elements, relationships and organizational principles	recall or recognition of previously learned material	D	In the original taxonomy, knowledge refers to recall or recognition of previously learned material.	\$4.2; R13
130	In Bloom's original 1956 cognitive taxonomy, which level is described as grasping meaning through processes such as translation, interpretation and extrapolation?	Comprehension	Knowledge	Analysis	Application	A	Comprehension is the original category associated with grasping meaning through processes such as translation, interpretation and extrapolation.	\$4.2; R13
131	Which description best fits the original Bloom category 'Comprehension'?	recall or recognition of previously learned material	using abstractions, principles or methods in new or concrete situations	grasping meaning through processes such as translation, interpretation and extrapolation	combining parts to form a new whole, plan, communication or set of abstract relations	C	In the original taxonomy, comprehension refers to grasping meaning through processes such as translation, interpretation and extrapolation.	\$4.2; R13
132	In Bloom's original 1956 cognitive taxonomy, which level is described as using abstractions, principles or methods in new or concrete situations?	Comprehension	Knowledge	Application	Synthesis	C	Application is the original category associated with using abstractions, principles or methods in new or concrete situations.	\$4.2; R13
133	Which description best fits the original Bloom category 'Application'?	making judgments using internal evidence or external criteria	using abstractions, principles or methods in new or concrete situations	recall or recognition of previously learned material	grasping meaning through processes such as translation, interpretation and extrapolation	B	In the original taxonomy, application refers to using abstractions, principles or methods in new or concrete situations.	\$4.2; R13
134	In Bloom's original 1956 cognitive taxonomy, which level is described as breaking material into parts and examining elements, relationships and organizational	Knowledge	Evaluation	Analysis	Application	C	Analysis is the original category associated with breaking material into parts and examining elements, relationships and organizational principles.	\$4.2; R13

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	principles?							
135	Which description best fits the original Bloom category 'Analysis'?	using abstractions, principles or methods in new or concrete situations	breaking material into parts and examining elements, relationships and organizational principles	grasping meaning through processes such as translation, interpretation and extrapolation	combining parts to form a new whole, plan, communication or set of abstract relations	B	In the original taxonomy, analysis refers to breaking material into parts and examining elements, relationships and organizational principles.	\$4.2; R13
136	In Bloom's original 1956 cognitive taxonomy, which level is described as combining parts to form a new whole, plan, communication or set of abstract relations?	Application	Comprehension	Synthesis	Knowledge	C	Synthesis is the original category associated with combining parts to form a new whole, plan, communication or set of abstract relations.	\$4.2; R13
137	Which description best fits the original Bloom category 'Synthesis'?	making judgments using internal evidence or external criteria	combining parts to form a new whole, plan, communication or set of abstract relations	grasping meaning through processes such as translation, interpretation and extrapolation	using abstractions, principles or methods in new or concrete situations	B	In the original taxonomy, synthesis refers to combining parts to form a new whole, plan, communication or set of abstract relations.	\$4.2; R13
138	In Bloom's original 1956 cognitive taxonomy, which level is described as making judgments using internal evidence or external criteria?	Evaluation	Synthesis	Application	Analysis	A	Evaluation is the original category associated with making judgments using internal evidence or external criteria.	\$4.2; R13
139	Which description best fits the original Bloom category 'Evaluation'?	combining parts to form a new whole, plan, communication or set of abstract relations	grasping meaning through processes such as translation, interpretation and extrapolation	making judgments using internal evidence or external criteria	recall or recognition of previously learned material	C	In the original taxonomy, evaluation refers to making judgments using internal evidence or external criteria.	\$4.2; R13
140	In Bloom's original Knowledge category, 'Terminology' belongs under which broader subcategory?	Universals and abstractions in a field	Knowledge of specifics	Ways and means of dealing with specifics	Comprehension	B	Terminology is classified under Knowledge of specifics.	\$4.2; R13
141	In Bloom's original Knowledge category, 'Specific facts' belongs under which broader subcategory?	Universals and abstractions in a field	Comprehension	Knowledge of specifics	Ways and means of dealing with specifics	C	Specific facts is classified under Knowledge of specifics.	\$4.2; R13
142	In Bloom's original Knowledge category,	Universals and abstractions in a field	Comprehension	Ways and means of dealing with specifics	Knowledge of specifics	C	Conventions is classified under Ways	\$4.2; R13

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	'Conventions' belongs under which broader subcategory?						and means of dealing with specifics.	
143	In Bloom's original Knowledge category, 'Trends and sequences' belongs under which broader subcategory?	Comprehension	Ways and means of dealing with specifics	Knowledge of specifics	Universals and abstractions in a field	B	Trends and sequences is classified under Ways and means of dealing with specifics.	\$4.2; R13
144	In Bloom's original Knowledge category, 'Classifications and categories' belongs under which broader subcategory?	Ways and means of dealing with specifics	Universals and abstractions in a field	Comprehension	Knowledge of specifics	A	Classifications and categories is classified under Ways and means of dealing with specifics.	\$4.2; R13
145	In Bloom's original Knowledge category, 'Criteria' belongs under which broader subcategory?	Knowledge of specifics	Comprehension	Ways and means of dealing with specifics	Universals and abstractions in a field	C	Criteria is classified under Ways and means of dealing with specifics.	\$4.2; R13
146	In Bloom's original Knowledge category, 'Methodology' belongs under which broader subcategory?	Universals and abstractions in a field	Ways and means of dealing with specifics	Comprehension	Knowledge of specifics	B	Methodology is classified under Ways and means of dealing with specifics.	\$4.2; R13
147	In Bloom's original Knowledge category, 'Principles and generalizations' belongs under which broader subcategory?	Universals and abstractions in a field	Knowledge of specifics	Ways and means of dealing with specifics	Comprehension	A	Principles and generalizations is classified under Universals and abstractions in a field.	\$4.2; R13
148	In Bloom's original Knowledge category, 'Theories and structures' belongs under which broader subcategory?	Universals and abstractions in a field	Knowledge of specifics	Comprehension	Ways and means of dealing with specifics	A	Theories and structures is classified under Universals and abstractions in a field.	\$4.2; R13
149	Which subcategory of Comprehension is described as restating or converting material from one form to another while preserving meaning?	Recognition	Translation	Interpretation	Extrapolation	B	This is translation, one of Bloom's three comprehension subcategories.	\$4.2; R13
150	Which subcategory of Comprehension is described as explaining or reorganizing meaning from a communication?	Recognition	Interpretation	Extrapolation	Translation	B	This is interpretation, one of Bloom's three comprehension subcategories.	\$4.2; R13

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
151	Which subcategory of Comprehension is described as extending trends or implications beyond the data explicitly given?	Translation	Interpretation	Recognition	Extrapolation	D	This is extrapolation, one of Bloom's three comprehension subcategories.	\$4.2; R13
152	Which original Analysis subcategory is primarily concerned with identifying or distinguishing constituent parts?	Analysis of organizational principles	Application	Analysis of relationships	Analysis of elements	D	The description corresponds to analysis of elements.	\$4.2; R13
153	Which original Analysis subcategory is primarily concerned with examining connections among elements?	Application	Analysis of relationships	Analysis of elements	Analysis of organizational principles	B	The description corresponds to analysis of relationships.	\$4.2; R13
154	Which original Analysis subcategory is primarily concerned with identifying the structure or organizing principles of a communication?	Analysis of relationships	Analysis of elements	Analysis of organizational principles	Application	C	The description corresponds to analysis of organizational principles.	\$4.2; R13
155	Which original Synthesis subcategory is best represented by creating an original communication?	Derivation of a set of abstract relations	Production of a unique communication	Production of a plan or proposed set of operations	Analysis of relationships	B	This is production of a unique communication.	\$4.2; R13
156	Which original Synthesis subcategory is best represented by designing a plan or sequence of action?	Production of a plan or proposed set of operations	Analysis of relationships	Production of a unique communication	Derivation of a set of abstract relations	A	This is production of a plan or proposed set of operations.	\$4.2; R13
157	Which original Synthesis subcategory is best represented by formulating or deriving a system of abstract relationships?	Analysis of relationships	Derivation of a set of abstract relations	Production of a plan or proposed set of operations	Production of a unique communication	B	This is derivation of a set of abstract relations.	\$4.2; R13
158	Under Bloom's ORIGINAL cognitive taxonomy, which level is best represented by this task? A learner lists the six original levels of Bloom's taxonomy.	Synthesis	Analysis	Knowledge	Evaluation	C	The task primarily requires knowledge.	\$4.2; R13
159	Under Bloom's	Synthesis	Evaluation	Application	Comprehension	D	The task primarily	\$4.2; R13

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	ORIGINAL cognitive taxonomy, which level is best represented by this task? A learner paraphrases the meaning of an extension concept in their own words.						requires comprehension.	
160	Under Bloom's ORIGINAL cognitive taxonomy, which level is best represented by this task? A learner uses a known formula to calculate seed rate for a new field.	Evaluation	Knowledge	Comprehension	Application	D	The task primarily requires application.	\$4.2; R13
161	Under Bloom's ORIGINAL cognitive taxonomy, which level is best represented by this task? A learner separates the causes of low adoption into farmer, technology and institutional factors and examines their relationships.	Comprehension	Analysis	Application	Synthesis	B	The task primarily requires analysis.	\$4.2; R13
162	Under Bloom's ORIGINAL cognitive taxonomy, which level is best represented by this task? A learner designs a new extension campaign by combining several ideas into an original plan.	Evaluation	Synthesis	Application	Knowledge	B	The task primarily requires synthesis.	\$4.2; R13
163	Under Bloom's ORIGINAL cognitive taxonomy, which level is best represented by this task? A learner judges two extension strategies against explicit criteria and justifies which is better.	Application	Synthesis	Comprehension	Evaluation	D	The task primarily requires evaluation.	\$4.2; R13
164	In the 2001 revised cognitive taxonomy, which process category is described as retrieving relevant	Evaluate	Understand	Create	Remember	D	The revised category is Remember.	\$4.2; R14

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	knowledge from memory?							
165	In the 2001 revised cognitive taxonomy, which process category is described as constructing meaning from instructional messages?	Evaluate	Understand	Remember	Analyze	B	The revised category is Understand.	\$4.2; R14
166	In the 2001 revised cognitive taxonomy, which process category is described as carrying out or using a procedure in a given situation?	Remember	Apply	Evaluate	Create	B	The revised category is Apply.	\$4.2; R14
167	In the 2001 revised cognitive taxonomy, which process category is described as breaking material into constituent parts and determining relationships/structure?	Remember	Analyze	Create	Apply	B	The revised category is Analyze.	\$4.2; R14
168	In the 2001 revised cognitive taxonomy, which process category is described as making judgments based on criteria and standards?	Evaluate	Analyze	Remember	Understand	A	The revised category is Evaluate.	\$4.2; R14
169	In the 2001 revised cognitive taxonomy, which process category is described as putting elements together to form a coherent or original whole?	Create	Understand	Apply	Evaluate	A	The revised category is Create.	\$4.2; R14
170	Which sequence gives the revised 2001 cognitive process categories from lower to higher?	Remember → Understand → Apply → Analyze → Evaluate → Create	Knowledge → Comprehension → Application → Analysis → Synthesis → Evaluation	Remember → Apply → Understand → Create → Analyze → Evaluate	Understand → Remember → Evaluate → Apply → Create → Analyze	A	The revised order is Remember, Understand, Apply, Analyze, Evaluate, Create.	\$4.2; R14
171	What happened to 'Synthesis' in the revised Bloom taxonomy?	It was reconceptualized as Create, which became the highest process category	It became Remember	It was renamed Apply and moved lower	It was removed with no replacement	A	The revision uses Create at the top, replacing/reconceptualizing Synthesis.	\$4.2; R14

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
172	A major wording change in the 2001 revision was to express cognitive process categories primarily as:	Verbs	Chemical symbols	Numbers only	Personality traits	A	The revision shifted category names from nouns to action-oriented verbs.	\$4.2; R14
173	Which set belongs to the knowledge dimension of the revised taxonomy?	Factual, conceptual, procedural, metacognitive	Knowledge, comprehension, application, analysis	Receiving, responding, valuing, organization	Perception, set, guided response, mechanism	A	The revised taxonomy adds four knowledge types: factual, conceptual, procedural and metacognitive.	\$4.2; R14
174	Knowledge of a specific term or discrete factual detail is classified in the revised taxonomy as:	Factual knowledge	Metacognitive knowledge	Procedural knowledge	Affective knowledge	A	Terminology and discrete facts are factual knowledge.	\$4.2; R14
175	Knowledge of categories, principles, models and relationships among concepts is primarily:	Conceptual knowledge	Factual knowledge	Psychomotor knowledge	Receiving	A	Conceptual knowledge includes categories, principles, generalizations, theories, models and structures.	\$4.2; R14
176	Knowing how to carry out a method, technique or algorithm is:	Procedural knowledge	Factual knowledge	Valuing	Characterization	A	Procedural knowledge concerns how to do something.	\$4.2; R14
177	Awareness of one's own cognition and knowledge of learning strategies is:	Metacognitive knowledge	Specific factual knowledge	Guided response	External evaluation	A	Metacognitive knowledge includes knowledge about cognition and one's own learning.	\$4.2; R14
178	Which distinction between the original and revised taxonomies is correct?	Original: Synthesis before Evaluation; Revised: Evaluate before Create	Original: Create was lowest; Revised: Knowledge was highest	Both use exactly the same labels and order	The revised taxonomy has only three levels	A	The upper-order sequence changed: original ends Synthesis → Evaluation; revised ends Evaluate → Create.	\$4.2; R13, R14
179	In Krathwohl, Bloom and Masia's affective taxonomy, which level is described as becoming aware of, willing to attend to, and selectively attending to a phenomenon?	Organization	Receiving	Valuing	Characterization	B	The description corresponds to Receiving.	\$4.3; R15
180	Which description best matches the affective level	acting consistently according to an internalized value or	attaching worth to a phenomenon, from acceptance and	conceptualizing values and organizing them into a coherent value	becoming aware of, willing to attend to, and selectively	D	Receiving represents becoming aware of, willing to attend to,	\$4.3; R15

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	'Receiving'?	value system	preference to commitment	system	attending to a phenomenon		and selectively attending to a phenomenon.	
181	In Krathwohl, Bloom and Masia's affective taxonomy, which level is described as actively participating, from acquiescence to willingness and satisfaction in responding?	Characterization	Receiving	Organization	Responding	D	The description corresponds to Responding.	\$4.3; R15
182	Which description best matches the affective level 'Responding'?	attaching worth to a phenomenon, from acceptance and preference to commitment	actively participating, from acquiescence to willingness and satisfaction in responding	conceptualizing values and organizing them into a coherent value system	becoming aware of, willing to attend to, and selectively attending to a phenomenon	B	Responding represents actively participating, from acquiescence to willingness and satisfaction in responding.	\$4.3; R15
183	In Krathwohl, Bloom and Masia's affective taxonomy, which level is described as attaching worth to a phenomenon, from acceptance and preference to commitment?	Characterization	Receiving	Valuing	Organization	C	The description corresponds to Valuing.	\$4.3; R15
184	Which description best matches the affective level 'Valuing'?	actively participating, from acquiescence to willingness and satisfaction in responding	acting consistently according to an internalized value or value system	attaching worth to a phenomenon, from acceptance and preference to commitment	conceptualizing values and organizing them into a coherent value system	C	Valuing represents attaching worth to a phenomenon, from acceptance and preference to commitment.	\$4.3; R15
185	In Krathwohl, Bloom and Masia's affective taxonomy, which level is described as conceptualizing values and organizing them into a coherent value system?	Responding	Organization	Receiving	Valuing	B	The description corresponds to Organization.	\$4.3; R15
186	Which description best matches the affective level 'Organization'?	actively participating, from acquiescence to willingness and satisfaction in responding	conceptualizing values and organizing them into a coherent value system	attaching worth to a phenomenon, from acceptance and preference to commitment	becoming aware of, willing to attend to, and selectively attending to a phenomenon	B	Organization represents conceptualizing values and organizing them into a coherent value system.	\$4.3; R15
187	In Krathwohl, Bloom and Masia's affective taxonomy, which level is described as acting	Organization	Characterization	Valuing	Responding	B	The description corresponds to Characterization.	\$4.3; R15

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	consistently according to an internalized value or value system?							
188	Which description best matches the affective level 'Characterization'?	becoming aware of, willing to attend to, and selectively attending to a phenomenon	conceptualizing values and organizing them into a coherent value system	attaching worth to a phenomenon, from acceptance and preference to commitment	acting consistently according to an internalized value or value system	D	Characterization represents acting consistently according to an internalized value or value system.	\$4.3; R15
189	In the original affective taxonomy, 'Awareness' is a subcategory of which major level?	Valuing	Receiving	Responding	Organization	B	Awareness belongs under Receiving.	\$4.3; R15
190	In the original affective taxonomy, 'Willingness to receive' is a subcategory of which major level?	Valuing	Receiving	Characterization	Organization	B	Willingness to receive belongs under Receiving.	\$4.3; R15
191	In the original affective taxonomy, 'Controlled or selected attention' is a subcategory of which major level?	Receiving	Responding	Valuing	Organization	A	Controlled or selected attention belongs under Receiving.	\$4.3; R15
192	In the original affective taxonomy, 'Acquiescence in responding' is a subcategory of which major level?	Receiving	Responding	Organization	Valuing	B	Acquiescence in responding belongs under Responding.	\$4.3; R15
193	In the original affective taxonomy, 'Willingness to respond' is a subcategory of which major level?	Organization	Receiving	Characterization	Responding	D	Willingness to respond belongs under Responding.	\$4.3; R15
194	In the original affective taxonomy, 'Satisfaction in response' is a subcategory of which major level?	Responding	Valuing	Receiving	Characterization	A	Satisfaction in response belongs under Responding.	\$4.3; R15
195	In the original affective taxonomy, 'Acceptance of a value' is a subcategory of which major level?	Responding	Valuing	Receiving	Organization	B	Acceptance of a value belongs under Valuing.	\$4.3; R15
196	In the original affective taxonomy, 'Preference for a	Receiving	Organization	Valuing	Responding	C	Preference for a value belongs under Valuing.	\$4.3; R15

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	value' is a subcategory of which major level?							
197	In the original affective taxonomy, 'Commitment' is a subcategory of which major level?	Valuing	Responding	Receiving	Characterization	A	Commitment belongs under Valuing.	\$4.3; R15
198	In the original affective taxonomy, 'Conceptualization of a value' is a subcategory of which major level?	Valuing	Receiving	Organization	Responding	C	Conceptualization of a value belongs under Organization.	\$4.3; R15
199	In the original affective taxonomy, 'Organization of a value system' is a subcategory of which major level?	Responding	Organization	Receiving	Valuing	B	Organization of a value system belongs under Organization.	\$4.3; R15
200	In the original affective taxonomy, 'Generalized set' is a subcategory of which major level?	Characterization	Receiving	Organization	Responding	A	Generalized set belongs under Characterization.	\$4.3; R15
201	In the original affective taxonomy, 'Characterization' is a subcategory of which major level?	Responding	Characterization	Receiving	Organization	B	Characterization belongs under Characterization.	\$4.3; R15
202	Which affective level is best represented by this situation? A participant notices and pays attention when soil-health risks are discussed.	Responding	Valuing	Characterization	Receiving	D	The behaviour best fits Receiving.	\$4.3; R15
203	Which affective level is best represented by this situation? A participant voluntarily joins a discussion and answers questions about waste segregation.	Responding	Organization	Receiving	Valuing	A	The behaviour best fits Responding.	\$4.3; R15
204	Which affective level is best represented by this situation? A participant expresses a clear preference for safe chemical handling and sees it as important.	Responding	Characterization	Organization	Valuing	D	The behaviour best fits Valuing.	\$4.3; R15

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
205	Which affective level is best represented by this situation? A participant reconciles productivity and environmental values into a coherent personal decision framework.	Responding	Valuing	Organization	Characterization	C	The behaviour best fits Organization.	\$4.3; R15
206	Which affective level is best represented by this situation? A farmer consistently follows safety practices because they have become part of the farmer's stable value system.	Characterization	Responding	Organization	Valuing	A	The behaviour best fits Characterization.	\$4.3; R15
207	Which sequence correctly orders the major affective levels from lower to higher internalization?	Receiving → Responding → Valuing → Organization → Characterization	Responding → Receiving → Organization → Valuing → Characterization	Valuing → Receiving → Responding → Characterization → Organization	Receiving → Valuing → Responding → Characterization → Organization	A	The affective hierarchy moves from receiving to stable characterization by values.	\$4.3; R15
208	The central developmental idea in the affective taxonomy is increasing:	Internalization of values	Motor speed	Factual recall	Device sophistication	A	The taxonomy represents progressive internalization from attention to consistent value-guided behaviour.	\$4.3; R15
209	In Simpson's psychomotor taxonomy, which level is described as using sensory cues to guide motor activity?	Guided Response	Complex Overt Response	Perception	Set	C	The description corresponds to Perception.	\$4.4; R16
210	Which description best matches Simpson's level 'Perception'?	readiness to act, including mental, physical and emotional readiness	early learning of a complex skill through imitation and trial-and-error practice	creating new movement patterns or procedures to fit a particular situation or problem	using sensory cues to guide motor activity	D	Perception refers to using sensory cues to guide motor activity.	\$4.4; R16
211	In Simpson's psychomotor taxonomy, which level is described as readiness to act, including mental, physical and emotional readiness?	Adaptation	Perception	Set	Complex Overt Response	C	The description corresponds to Set.	\$4.4; R16
212	Which description best matches Simpson's level 'Set'?	performing a learned response with growing confidence, proficiency and	early learning of a complex skill through imitation and trial-and-error practice	using sensory cues to guide motor activity	readiness to act, including mental, physical and emotional readiness	D	Set refers to readiness to act, including mental, physical and emotional readiness.	\$4.4; R16

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
		habitual control						
213	In Simpson's psychomotor taxonomy, which level is described as early learning of a complex skill through imitation and trial-and-error practice?	Mechanism	Guided Response	Complex Overt Response	Perception	B	The description corresponds to Guided Response.	\$4.4; R16
214	Which description best matches Simpson's level 'Guided Response'?	skillful, smooth and accurate performance of complex motor patterns	early learning of a complex skill through imitation and trial-and-error practice	using sensory cues to guide motor activity	creating new movement patterns or procedures to fit a particular situation or problem	B	Guided Response refers to early learning of a complex skill through imitation and trial-and-error practice.	\$4.4; R16
215	In Simpson's psychomotor taxonomy, which level is described as performing a learned response with growing confidence, proficiency and habitual control?	Perception	Guided Response	Complex Overt Response	Mechanism	D	The description corresponds to Mechanism.	\$4.4; R16
216	Which description best matches Simpson's level 'Mechanism'?	performing a learned response with growing confidence, proficiency and habitual control	early learning of a complex skill through imitation and trial-and-error practice	modifying learned movement patterns to meet special requirements or new situations	using sensory cues to guide motor activity	A	Mechanism refers to performing a learned response with growing confidence, proficiency and habitual control.	\$4.4; R16
217	In Simpson's psychomotor taxonomy, which level is described as skillful, smooth and accurate performance of complex motor patterns?	Complex Overt Response	Adaptation	Origination	Set	A	The description corresponds to Complex Overt Response.	\$4.4; R16
218	Which description best matches Simpson's level 'Complex Overt Response'?	modifying learned movement patterns to meet special requirements or new situations	skillful, smooth and accurate performance of complex motor patterns	readiness to act, including mental, physical and emotional readiness	performing a learned response with growing confidence, proficiency and habitual control	B	Complex Overt Response refers to skillful, smooth and accurate performance of complex motor patterns.	\$4.4; R16
219	In Simpson's psychomotor taxonomy, which level is described as modifying learned movement patterns to meet special requirements or new	Complex Overt Response	Adaptation	Guided Response	Origination	B	The description corresponds to Adaptation.	\$4.4; R16

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	situations?							
220	Which description best matches Simpson's level 'Adaptation'?	early learning of a complex skill through imitation and trial-and-error practice	using sensory cues to guide motor activity	readiness to act, including mental, physical and emotional readiness	modifying learned movement patterns to meet special requirements or new situations	D	Adaptation refers to modifying learned movement patterns to meet special requirements or new situations.	\$4.4; R16
221	In Simpson's psychomotor taxonomy, which level is described as creating new movement patterns or procedures to fit a particular situation or problem?	Mechanism	Perception	Guided Response	Origination	D	The description corresponds to Origination.	\$4.4; R16
222	Which description best matches Simpson's level 'Origination'?	modifying learned movement patterns to meet special requirements or new situations	creating new movement patterns or procedures to fit a particular situation or problem	readiness to act, including mental, physical and emotional readiness	using sensory cues to guide motor activity	B	Origination refers to creating new movement patterns or procedures to fit a particular situation or problem.	\$4.4; R16
223	Which Simpson psychomotor level is best represented by this situation? A trainee uses visual and tactile cues to judge where to place a grafting cut.	Mechanism	Adaptation	Perception	Set	C	The performance best fits Perception.	\$4.4; R16
224	Which Simpson psychomotor level is best represented by this situation? Before operating equipment, a trainee adopts the correct stance and mentally prepares for the steps.	Complex Overt Response	Adaptation	Perception	Set	D	The performance best fits Set.	\$4.4; R16
225	Which Simpson psychomotor level is best represented by this situation? A trainee imitates the instructor's knot-tying demonstration and learns through repeated trial and error.	Adaptation	Mechanism	Set	Guided Response	D	The performance best fits Guided Response.	\$4.4; R16
226	Which Simpson psychomotor level is best represented by	Guided Response	Adaptation	Mechanism	Origination	C	The performance best fits Mechanism.	\$4.4; R16

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	this situation? A trainee can perform a familiar milking procedure confidently with little conscious hesitation.							
227	Which Simpson psychomotor level is best represented by this situation? An experienced technician performs a complex procedure smoothly, accurately and efficiently.	Complex Overt Response	Adaptation	Set	Guided Response	A	The performance best fits Complex Overt Response.	\$4.4; R16
228	Which Simpson psychomotor level is best represented by this situation? A farmer modifies a learned pruning technique to suit an unusual branch structure.	Complex Overt Response	Origination	Set	Adaptation	D	The performance best fits Adaptation.	\$4.4; R16
229	Which Simpson psychomotor level is best represented by this situation? A skilled worker develops a new movement sequence to solve a previously unfamiliar handling problem.	Adaptation	Origination	Mechanism	Complex Overt Response	B	The performance best fits Origination.	\$4.4; R16
230	Which sequence correctly orders Simpson's psychomotor levels from lower to higher?	Perception → Set → Guided Response → Mechanism → Complex Overt Response → Adaptation → Origination	Set → Perception → Mechanism → Guided Response → Origination → Adaptation → Complex Overt Response	Perception → Guided Response → Set → Mechanism → Adaptation → Complex Overt Response → Origination	Guided Response → Perception → Set → Complex Overt Response → Mechanism → Origination → Adaptation	A	Simpson's sequence begins with perception/readiness and culminates in origination.	\$4.4; R16
231	Which Simpson level most directly involves imitation?	Guided Response	Mechanism	Adaptation	Origination	A	Guided response includes imitation and trial and error.	\$4.4; R16
232	At which Simpson level does a response become relatively habitual and confidently performed?	Mechanism	Perception	Set	Origination	A	Mechanism represents learned performance that has become more habitual and proficient.	\$4.4; R16
233	Which distinction between Adaptation	Adaptation modifies an acquired skill for	Adaptation is sensory awareness;	Adaptation is imitation; Origination	They are identical	A	Adaptation alters learned patterns;	\$4.4; R16

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	and Origination is most accurate?	new conditions; Origination creates a new movement pattern or procedure	Origination is readiness	is habit			origination generates novel patterns or procedures.	
234	Which level immediately precedes Adaptation in Simpson's taxonomy?	Complex Overt Response	Guided Response	Set	Origination	A	The order is ... Mechanism, Complex Overt Response, Adaptation, Origination.	\$4.4; R16
235	Which is the highest level in Simpson's psychomotor taxonomy?	Origination	Adaptation	Complex Overt Response	Mechanism	A	Origination is the highest level, involving creation of new movement patterns.	\$4.4; R16
236	A learning objective states: 'Participants will list the components of a drip irrigation system.' Which domain and Bloom level are most directly targeted?	Cognitive - Knowledge/Remember	Affective - Valuing	Psychomotor - Adaptation	Affective - Characterization	A	Listing components is primarily recall in the cognitive domain.	\$4.1-4.2; R13/R14
237	'Participants will demonstrate correct calibration of a knapsack sprayer.' Which domain is primary?	Psychomotor	Affective	Only curriculum design	Only receiving	A	Demonstrating calibration is a skilled physical performance.	\$4.1; \$4.4
238	'Participants will consistently choose protective equipment because they value safe pesticide handling.' Which domain is primary?	Affective	Psychomotor only	Cognitive recall only	Administrative	A	The emphasis is internalized value-guided behaviour.	\$4.3
239	Which alignment is most appropriate for teaching a new grafting skill?	Demonstration → guided practice → feedback → independent performance assessment	Lecture only → no practice → recall test	Reading only → attitude scale only	Video entertainment → attendance certificate	A	A psychomotor skill requires modelled performance, guided response, practice and performance assessment.	\$3.2; \$4.4
240	Which alignment is most appropriate for a high-level cognitive outcome requiring evaluation?	Use evidence-based cases and ask learners to judge alternatives against explicit criteria	Ask learners only to copy definitions	Assess only attendance	Use only imitation practice	A	Evaluation requires reasoned judgment based on criteria.	\$4.2; R13/R14
241	Which alignment is most appropriate for an affective objective about commitment to inclusive farmer	Discussion, reflection, value clarification, role modelling and observation of consistent choices	Only a one-minute fact recall quiz	Only a motor drill	Only a device tutorial	A	Affective outcomes require engagement with values and evidence of internalization, not	\$4.3

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	participation?	over time					recall alone.	
242	A trainer chooses a sophisticated app even though most participants lack smartphones. Which ID principle is violated most directly?	Contextual and learner analysis	Synthesis	Characterization	Psychomotor adaptation	A	Design should fit learner access and context before selecting media.	\$3.1-3.2
243	A course has clear objectives and good content, but its exam tests unrelated facts. What is the main design problem?	Misalignment between objectives and assessment	Too much andragogy	Too much psychomotor learning	Excessive curriculum sequencing	A	Instructional alignment requires assessment to gather evidence of intended outcomes.	\$1.2; \$4.1
244	Which pair is correctly matched?	Affective domain - Krathwohl, Bloom and Masia	Psychomotor domain - Anderson and Krathwohl	Cognitive domain - Simpson	Andragogy - Benjamin Bloom	A	Krathwohl, Bloom and Masia are associated with the affective taxonomy.	\$4.2-4.4
245	Which pair is correctly matched?	Psychomotor domain - Elizabeth J. Simpson	Affective domain - Robert Reiser	Andragogy - Robert Gagne	Curriculum design - B. F. Skinner	A	Simpson is associated with the seven-level psychomotor taxonomy.	\$4.4; R16
246	Which pair is correctly matched?	Andragogy - Malcolm Knowles	Cognitive Flexibility - Benjamin Bloom	Affective domain - Elizabeth Simpson	Instructional media history - Malcolm Knowles	A	Malcolm Knowles is strongly associated with andragogy.	\$1.5; R9
247	Which pair is correctly matched?	History of instructional design - Robert A. Reiser	Andragogy - Elizabeth Simpson	Psychomotor taxonomy - David Krathwohl	AECT 2023 definition - Benjamin Bloom	A	Reiser's 2001 two-part history is a key source on ID/technology history.	\$2; R4/R5
248	Which statement best reflects good ET/ID practice in extension?	Start with learning/performance needs and use appropriate processes and resources to design, facilitate and evaluate learning	Start with the newest technology and force the learning problem to fit it	Ignore farmer experience because expert knowledge is sufficient	Treat evaluation as unnecessary after content delivery	A	Good design is learner-, need- and evidence-centred rather than technology-driven.	\$3
249	If an extension worker asks 'What should learners be able to do after this session?' the worker is primarily clarifying:	Learning outcomes/objectives	Device specifications	Institutional budget	Affective characterization only	A	The question asks for intended learning/performance outcomes.	\$3.2
250	If an extension worker asks 'What prior experience do these farmers bring?' the worker is primarily conducting:	Learner analysis	Summative certification	Hardware maintenance	External evaluation criteria	A	Prior experience is a core learner characteristic and an andragogical resource.	\$1.5; \$3.2
251	Which design decision best reflects 'architecting the	Planning how learners encounter a problem, interact, practise,	Selecting a decorative theme only	Choosing the longest lecture possible	Removing all opportunities for interaction	A	Learning-experience architecture concerns the designed sequence	\$3.2

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	learning experience’?	receive feedback and apply learning					and conditions of learning.	
252	Which statement about learning objectives is most defensible?	Different objectives may require different teaching and assessment methods because they belong to different domains and levels	Every objective is best assessed by the same test	All objectives should be written as vague intentions	Psychomotor objectives can be assessed fully by factual recall	A	Domain/level alignment is central to instructional design.	\$4.1
253	A learner can explain the importance of a safety procedure but does not value or consistently follow it. This illustrates that:	Cognitive understanding does not automatically guarantee affective internalization or psychomotor performance	All three domains are identical	Affective learning always precedes cognition	Knowledge automatically produces behaviour	A	Understanding, valuing and skilled action are related but distinct outcomes.	\$4.1
254	Which of the following is NOT one of the six major categories in Bloom’s ORIGINAL 1956 cognitive taxonomy?	Knowledge	Application	Synthesis	Create	D	Create is the highest category in the revised taxonomy; the original used Synthesis and Evaluation.	\$4.2; R13/R14
255	Which is NOT one of the five major affective levels?	Receiving	Responding	Valuing	Mechanism	D	Mechanism belongs to Simpson’s psychomotor taxonomy.	\$4.3-4.4
256	Which is NOT one of Simpson’s seven psychomotor levels?	Perception	Guided Response	Organization	Adaptation	C	Organization is an affective level, not a Simpson psychomotor level.	\$4.3-4.4
257	Which is NOT one of the commonly stated Knowles assumptions about adult learners?	Experience is a resource	Readiness relates to life roles	Problem-centred orientation	Adults are always dependent on the teacher	D	Knowles emphasizes increasing self-direction rather than unavoidable dependence.	\$1.5; R9
258	Which is NOT a typical instructional-design responsibility of an extension professional?	Analyzing learner needs	Selecting and sequencing learning activities	Evaluating results	Choosing technology without regard to purpose or access	D	Technology should be selected to fit purpose, learner and context.	\$3.2
259	Which is NOT included in UNESCO’s broad curriculum framing?	Purpose	Content	Learning activities/practices	Mandatory use of a particular device brand	D	Curriculum concerns purpose, content, learning processes and assessment, not a required commercial device.	\$1.4; R8
260	Which is NOT a feature of a systems approach to instruction?	Interdependent components	Feedback	Alignment with goals	Treating every component in isolation	D	Systems thinking focuses on relationships and interactions, not isolated parts.	\$1.3

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
261	Which is NOT a sound reason for using ET/ID in RAS?	To improve relevance and inclusion	To support scalable and blended learning	To align learning with real performance needs	To maximize technology use regardless of learning value	D	Technology intensity is not an educational objective in itself.	\$3.1
262	The category 'Receiving' belongs primarily to which framework/domain in this Unit I reference?	Cognitive-original	Psychomotor	Andragogy	Affective	D	Receiving is classified under Affective.	\$4
263	The category 'Responding' belongs primarily to which framework/domain in this Unit I reference?	Cognitive-original	Affective	Andragogy	Psychomotor	B	Responding is classified under Affective.	\$4
264	The category 'Valuing' belongs primarily to which framework/domain in this Unit I reference?	Psychomotor	Andragogy	Cognitive-original	Affective	D	Valuing is classified under Affective.	\$4
265	The category 'Organization' belongs primarily to which framework/domain in this Unit I reference?	Andragogy	Psychomotor	Cognitive-original	Affective	D	Organization is classified under Affective.	\$4
266	The category 'Characterization' belongs primarily to which framework/domain in this Unit I reference?	Affective	Cognitive-original	Psychomotor	Andragogy	A	Characterization is classified under Affective.	\$4
267	The category 'Perception' belongs primarily to which framework/domain in this Unit I reference?	Affective	Andragogy	Psychomotor	Cognitive-original	C	Perception is classified under Psychomotor.	\$4
268	The category 'Set' belongs primarily to which framework/domain in this Unit I reference?	Psychomotor	Affective	Cognitive-original	Andragogy	A	Set is classified under Psychomotor.	\$4
269	The category 'Guided Response' belongs primarily to which framework/domain in this Unit I reference?	Affective	Andragogy	Cognitive-original	Psychomotor	D	Guided Response is classified under Psychomotor.	\$4
270	The category 'Mechanism' belongs primarily to which framework/domain in this Unit I reference?	Cognitive-original	Affective	Psychomotor	Andragogy	C	Mechanism is classified under Psychomotor.	\$4
271	The category 'Complex	Psychomotor	Affective	Andragogy	Cognitive-original	A	Complex Overt	\$4

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	Overt Response' belongs primarily to which framework/domain in this Unit I reference?						Response is classified under Psychomotor.	
272	The category 'Adaptation' belongs primarily to which framework/domain in this Unit I reference?	Cognitive-original	Psychomotor	Andragogy	Affective	B	Adaptation is classified under Psychomotor.	\$4
273	The category 'Origination' belongs primarily to which framework/domain in this Unit I reference?	Andragogy	Cognitive-original	Affective	Psychomotor	D	Origination is classified under Psychomotor.	\$4
274	The category 'Knowledge' belongs primarily to which framework/domain in this Unit I reference?	Cognitive-original	Psychomotor	Andragogy	Affective	A	Knowledge is classified under Cognitive-original.	\$4
275	The category 'Comprehension' belongs primarily to which framework/domain in this Unit I reference?	Psychomotor	Affective	Andragogy	Cognitive-original	D	Comprehension is classified under Cognitive-original.	\$4
276	The category 'Application' belongs primarily to which framework/domain in this Unit I reference?	Cognitive-original	Psychomotor	Andragogy	Affective	A	Application is classified under Cognitive-original.	\$4
277	The category 'Analysis' belongs primarily to which framework/domain in this Unit I reference?	Andragogy	Psychomotor	Affective	Cognitive-original	D	Analysis is classified under Cognitive-original.	\$4
278	The category 'Synthesis' belongs primarily to which framework/domain in this Unit I reference?	Affective	Andragogy	Psychomotor	Cognitive-original	D	Synthesis is classified under Cognitive-original.	\$4
279	The category 'Evaluation' belongs primarily to which framework/domain in this Unit I reference?	Affective	Cognitive-original	Psychomotor	Andragogy	B	Evaluation is classified under Cognitive-original.	\$4
280	What is the position of 'Knowledge' in Bloom's original six-level cognitive sequence?	1	2	3	4	A	Knowledge is level 1 in the original sequence: Knowledge, Comprehension, Application, Analysis,	\$4.2; R13

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
							Synthesis, Evaluation.	
281	What is the position of 'Comprehension' in Bloom's original six-level cognitive sequence?	2	3	4	5	A	Comprehension is level 2 in the original sequence: Knowledge, Comprehension, Application, Analysis, Synthesis, Evaluation.	\$4.2; R13
282	What is the position of 'Application' in Bloom's original six-level cognitive sequence?	3	4	5	6	A	Application is level 3 in the original sequence: Knowledge, Comprehension, Application, Analysis, Synthesis, Evaluation.	\$4.2; R13
283	What is the position of 'Analysis' in Bloom's original six-level cognitive sequence?	4	5	6	3	A	Analysis is level 4 in the original sequence: Knowledge, Comprehension, Application, Analysis, Synthesis, Evaluation.	\$4.2; R13
284	What is the position of 'Synthesis' in Bloom's original six-level cognitive sequence?	5	6	2	3	A	Synthesis is level 5 in the original sequence: Knowledge, Comprehension, Application, Analysis, Synthesis, Evaluation.	\$4.2; R13
285	What is the position of 'Evaluation' in Bloom's original six-level cognitive sequence?	6	1	2	3	A	Evaluation is level 6 in the original sequence: Knowledge, Comprehension, Application, Analysis, Synthesis, Evaluation.	\$4.2; R13
286	What is the position of 'Receiving' in the five-level affective hierarchy?	3	5	2	1	D	Receiving is level 1 in the affective hierarchy.	\$4.3; R15
287	What is the position of 'Responding' in the five-level affective hierarchy?	4	3	1	2	D	Responding is level 2 in the affective hierarchy.	\$4.3; R15
288	What is the position of 'Valuing' in the five-level affective hierarchy?	4	1	3	5	C	Valuing is level 3 in the affective hierarchy.	\$4.3; R15
289	What is the position of 'Organization' in the five-level affective hierarchy?	5	2	4	1	C	Organization is level 4 in the affective hierarchy.	\$4.3; R15
290	What is the position of 'Characterization' in the five-level affective hierarchy?	3	2	5	1	C	Characterization is level 5 in the affective hierarchy.	\$4.3; R15

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
291	What is the position of 'Perception' in Simpson's seven-level psychomotor hierarchy?	1	5	7	4	A	Perception is level 1 in Simpson's sequence.	\$4.4; R16
292	What is the position of 'Set' in Simpson's seven-level psychomotor hierarchy?	1	2	4	6	B	Set is level 2 in Simpson's sequence.	\$4.4; R16
293	What is the position of 'Guided Response' in Simpson's seven-level psychomotor hierarchy?	2	4	1	3	D	Guided Response is level 3 in Simpson's sequence.	\$4.4; R16
294	What is the position of 'Mechanism' in Simpson's seven-level psychomotor hierarchy?	7	4	2	1	B	Mechanism is level 4 in Simpson's sequence.	\$4.4; R16
295	What is the position of 'Complex Overt Response' in Simpson's seven-level psychomotor hierarchy?	5	7	2	3	A	Complex Overt Response is level 5 in Simpson's sequence.	\$4.4; R16
296	What is the position of 'Adaptation' in Simpson's seven-level psychomotor hierarchy?	5	4	3	6	D	Adaptation is level 6 in Simpson's sequence.	\$4.4; R16
297	What is the position of 'Origination' in Simpson's seven-level psychomotor hierarchy?	6	7	5	1	B	Origination is level 7 in Simpson's sequence.	\$4.4; R16
298	Which level immediately follows 'Knowledge' in Bloom's original cognitive taxonomy?	Application	Comprehension	Synthesis	Evaluation	B	Comprehension immediately follows Knowledge.	\$4.2; R13
299	Which level immediately follows 'Comprehension' in Bloom's original cognitive taxonomy?	Knowledge	Analysis	Application	Synthesis	C	Application immediately follows Comprehension.	\$4.2; R13
300	Which level immediately follows 'Application' in Bloom's original cognitive taxonomy?	Synthesis	Knowledge	Analysis	Comprehension	C	Analysis immediately follows Application.	\$4.2; R13

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
301	Which level immediately follows 'Analysis' in Bloom's original cognitive taxonomy?	Evaluation	Comprehension	Application	Synthesis	D	Synthesis immediately follows Analysis.	\$4.2; R13
302	Which level immediately follows 'Synthesis' in Bloom's original cognitive taxonomy?	Comprehension	Application	Evaluation	Knowledge	C	Evaluation immediately follows Synthesis.	\$4.2; R13
303	Which level immediately follows 'Receiving' in the affective taxonomy?	Responding	Characterization	Organization	Valuing	A	Responding immediately follows Receiving.	\$4.3; R15
304	Which level immediately follows 'Responding' in the affective taxonomy?	Valuing	Characterization	Receiving	Organization	A	Valuing immediately follows Responding.	\$4.3; R15
305	Which level immediately follows 'Valuing' in the affective taxonomy?	Organization	Receiving	Responding	Characterization	A	Organization immediately follows Valuing.	\$4.3; R15
306	Which level immediately follows 'Organization' in the affective taxonomy?	Responding	Valuing	Characterization	Receiving	C	Characterization immediately follows Organization.	\$4.3; R15
307	Which level immediately follows 'Perception' in Simpson's psychomotor taxonomy?	Complex Overt Response	Adaptation	Set	Origination	C	Set immediately follows Perception.	\$4.4; R16
308	Which level immediately follows 'Set' in Simpson's psychomotor taxonomy?	Guided Response	Perception	Mechanism	Origination	A	Guided Response immediately follows Set.	\$4.4; R16
309	Which level immediately follows 'Guided Response' in Simpson's psychomotor taxonomy?	Set	Complex Overt Response	Adaptation	Mechanism	D	Mechanism immediately follows Guided Response.	\$4.4; R16
310	Which level immediately follows 'Mechanism' in Simpson's psychomotor taxonomy?	Origination	Perception	Guided Response	Complex Overt Response	D	Complex Overt Response immediately follows Mechanism.	\$4.4; R16
311	Which level immediately follows	Origination	Perception	Adaptation	Mechanism	C	Adaptation immediately follows	\$4.4; R16

No.	Question	Option A	Option B	Option C	Option D	Correct	Explanation	Reference
	'Complex Overt Response' in Simpson's psychomotor taxonomy?						Complex Overt Response.	
312	Which level immediately follows 'Adaptation' in Simpson's psychomotor taxonomy?	Origination	Guided Response	Set	Mechanism	A	Origination immediately follows Adaptation.	\$4.4; R16
